

JEFFREY DING

jhdning@berkeley.edu | (650) 392-5689 | [linkedin.com/in/jeffreyhding](https://www.linkedin.com/in/jeffreyhding)

EDUCATION

University of California, Berkeley

Expected May 2027

Majors: B.A. in Statistics, B.A. in Economics

GPA: 3.85/4.0

Relevant coursework: Statistical Prediction & Machine Learning, Statistical & Causal Inference, Time Series Analysis, Probability Theory, Computing with Data, Data Structures & Algorithms, Microeconomics, Macroeconomics, Econometrics

SKILLS

Technical Skills: Probability Theory, Statistical Modeling, Time Series Analysis & Forecasting, Machine Learning, Feature Engineering, Exploratory Data Analysis, Data Visualization & Dashboarding, Data Engineering & Pipeline Development

Programming Languages: Python (statsmodels, scikit-learn, LightGBM, XGBoost, PyTorch, TensorFlow, JAX, PyMC, SQLAlchemy), R (tidyverse, tidymodels, Plotly, Shiny, htmltools, Leaflet), SQL (PostgreSQL), Java

Workflow & Design Tools: Git/GitHub, Microsoft Office Suite, LaTeX, Markdown

PROFESSIONAL EXPERIENCE

Cytokinetics

Statistical Programming Intern | Clinical Biometrics

May 2026 – present

- Developed a centralized statistical monitoring dashboard for global Phase 3 *omecamtiv mecarbil* clinical trial oversight, generating input-driven clinical data visualizations and integrating hypothesis-testing logic to flag site-level risk patterns
- Designed a statistical-programmer-facing agent for Cytokinetics' internal LLM and integrated it into an automated, iterative translation-validation pipeline for converting the biostatistics SAS codebase into standardized R packages

Associated Students of the University of California

Dept. Lead, Data Engineering & Systems | Office of the Chief Financial Officer

Sep 2025 – present

- Redesigned the ASUC Finance Office's data processing pipeline to batch-clean and reconcile raw financial records while validating fund allocations, scaling throughput from a week's worth of records to a semester's worth per minute
- Developed an ETL workflow integrating the revamped pipeline to consolidate financial data and load standardized outputs into a centralized PostgreSQL database with an upload/query frontend, streamlining annual budget/space allocation and auditing for a \$12M student union budget serving 1,200+ sponsored organizations

San Francisco Estuary Partnership

Data Science Intern

Jan 2026 – May 2026

- Developed R Shiny map dashboards linking ACS-based social vulnerability data and shoreline access points to identify vulnerable communities with limited shoreline access based on selectable target demographic and transit variables, informing public-access policy and restoration funding decisions related to Measure AA's \$25M annual tax revenue

RESEARCH EXPERIENCE

UC San Francisco, Fan Lab

Research Assistant | Computational Neurophysiology

Jun 2026 – present

- Developed pipelines to analyze high-dimensional intracranial EEG (iEEG) sleep recordings, using line-length spike detection and spectral power analysis to characterize cortical hyperexcitability in epilepsy and depression patients
- Extended existing iEEG connectivity analyses from static sleep-state networks to dynamic epoch comparisons, using Louvain community detection to characterize transitions in functional network organization across sleep states

UC Berkeley Haas School of Business, Prof. Anastassia Fedyk

Research Assistant | Econometric Analysis for Public Policy

Jan 2025 – Feb 2026

- Built valuation modeling pipelines for international military aid to Ukraine using public procurement data, finding that official U.S. State Department valuations overstated the real-dollar value of U.S. military aid by approximately 150%

PROJECTS (GitHub: github.com/jeffreyhding)

NBA Player Stat Visualizer: jeffreyd.shinyapps.io/nba-players | **R:** Shiny, Plotly, tidyverse

- Built and deployed an interactive R Shiny dashboard for analyzing player performance trends with matchup-specific filters and historical game-level comparisons; generated 1,500+ unique sessions during the 2024-25 NBA season
